

Black Ice Boost

Battery-Free On-Board Guitar Boost

UPC Number 851974004019

The battery-free, on-board Black Ice Boost provides fingertip access to 2-7db of boost that's broadly concentrated in the midrange frequencies. It's three stages of boost (select-able) have been fine tuned to add volume and girth to Strat, Tele and other types of single coil pickups.* Use it as a clean boost, or pair it with our Black Ice Distort module for additional dirty boost options – all battery free.

The small Black Ice Boost module (approx. 2/3 the size of a 9v battery) can be easily installed in most instruments with no routing or permanent modifications required. The tone of your instrument remains completely unaffected when the boost is bypassed. A variety of wiring options and complete instructions are provided.

* Black Ice Boost also works well with other passive pickups that might benefit from additional midrange emphasis and a small reduction in high frequencies.

- 2db, 4db or 7db (selectable) of clean, true active-like boost
- No battery required
- Easy to install
- No routing or permanent modifications required
- Tone is completely unaffected when bypassed

Black Ice Distort

Battery-Free On-Board Distortion Circuit

UPC Number 851974004026

Dial in some fun with Black Ice Distort, the battery-free circuit that turns your guitar's tone control into a great-sounding onboard distortion. With no batteries to worry about, Black Ice Distort provides a lifetime of tone with no maintenance required.

The versatile Black Ice Distort module can be configured for just a touch of grit, a more aggressive grind or 60's flavored fuzz. While this sugar cube sized device will never replace the refined sound of a good pedal, it provides handy, there-when-you-need-it access to a variety of old-school flavors, and a great way to add additional textures to an already overdriven amp or pedal. Bass players especially will dig it's raw dirty grind.

The super small , easy to install Black Ice Distort module is compatible with all passive guitar and bass pickups. Use it separately, or pair it with our Black Ice Boost module for additional dirty boost options.* A variety of wiring options and complete instructions are provided.

* Black Ice Distort will not boost the volume or sustain of your guitar when used without our Black Ice Boost module.

- Provides fingertip access to a variety of fun, old-school distortion flavors
- No battery required
- Easy to install
- No permanent modifications required
- Compatible with all passive guitar and bass pickups
